

Krista AI Orchestration and Collaboration for Private Equity Firms

Solution Overview:

Krista is a no-code AI-led orchestration platform designed to help private equity firms transform operations across their portfolio companies. Unlike generic AI tools, Krista integrates with existing systems using natural language processing (NLP) to orchestrate business workflows across your systems, people, and AI in plain language.

From automating customer service ticketing to answering policy questions or streamlining compliance processes, Krista adapts to your needs without requiring extensive technical resources. Its conversational interface allows teams to describe workflows in natural language, making AI adoption simple and efficient.

“ Krista is to AI what Power BI and Tableau are to data. The minute you need an agnostic AI solution that spans multiple systems, data, and teams, **Krista is the answer.**”

CHRISTIAN TIMOL
President, COO

Features and Benefits: **Integrate, Automate, Orchestrate**

Conversational AI Interface: Build AI-led workflows using natural language—no coding or training required. Integrate and deploy solutions in weeks, not months.

Workflow Automation: Handles many processes, including financial reporting, compliance monitoring, customer onboarding, and more.

AI Integration: Works with the best available AI tools and supports custom machine learning models tailored to specific needs.

Compliance Monitoring: Identifies and addresses security and compliance risks in real-time with proactive recommendations.

Scalable Deployment: Supports a crawl-walk-run approach to automation so companies can start small and tackle more ambitious projects over time.

Success Stories: [Achieving Real ROI for Our Customers](#)

Horatius Group, a boutique investment bank, used Krista to automate the extraction and structuring of data from confidential information memoranda (CIMs). This reduced review times from over 40 hours to under an hour, enabling the firm to evaluate 10x more opportunities without increasing headcount.

A healthcare provider improved employee support by deploying an AI agent to answer process queries 24x7 to maintain compliance and reduce penalties.

An eCommerce company improved its customer support workflows by integrating Krista to handle responses in real-time, down from a 24-hour turnaround. This change not only lowered operational costs but also significantly improved customer satisfaction.

Pricing

Krista uses a consumption-based model tailored to the scope and complexity of each deployment.

Next Steps
